Electronic Security Systems & Fire Safety Specialists

WLS has been designing, installing and maintaining security systems for more than 30 years. Following a full risk assessment of your building, our consultants can design an optimal security solution tailored to your needs. You'll be assigned a dedicated project manager to install and program the system, demonstrate it to you and provide all relevant certification.

As an NSI Gold approved company, we insist on hiring the best. Our uniformed engineers are manufacturer trained and regularly audited to ensure that we deliver the highest levels of service.

Access control

At the heart of any security system is access control – who has access to the premises, and why and when? Options include keys, fobs or cards, through to facial & fingerprint recognition. There are software-based or cloud-based solutions. You might need integrated CCTV, or vehicle recognition systems for gate access. Call us to discuss your requirements with one of our consultants, and identify the best solution for your site. WLS are NSI Gold certified for access control installation. All systems come with 12 month on-site warranty and include a six month service visit.

CCTV

With more than 30 years of experience, WLS are at the forefront of CCTV technology. You can expect unbiased advice from our fully trained consultants, and a system optimised to your context and your budget. Tell us what you need – from night time viewing to video analytics, number plate recognition cameras to mobile phone viewing – and we'll incorporate it into your system. We can also offer remote monitoring and police response from our central station.

Our systems are backed up with a 12 month on site warranty, six month service visit, and our reputation as an NSI Gold Installer.

Intruder Alarms

WLS has been installing and maintaining intruder alarm systems for over 30 years, so you can count on a system that is hassle-free and easy to use. We only fit proven technologies, giving us one of the lowest false alarm records in the industry. For added protection, you can connect your system to our remote monitoring station and ensure a swift police response in the event of a break-in.

For your peace of mind, every NSI Gold certified installation includes a full 1 year warranty and full service after six months.

Door Entry

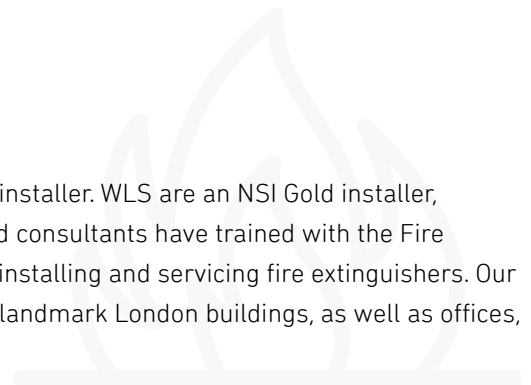

WLS have been installing door entry systems for over 30 years, using top manufacturers such as BPT, Aiphone and Comelit. Give us a call to talk through what you might require – video or audio entry systems, wired or WiFi systems, or mobile phone based solutions. Our expert technicians can advise on the various options and install to your specifications.

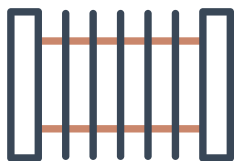

If you have a problem with an existing door entry system, WLS has the experience to diagnose and repair faults on virtually any system. We already do this for a number of major London estates.

Fire

You need a fire alarm you can rely on in an emergency, and that means you need a trusted installer. WLS are an NSI Gold installer, approved by BAFE, and certified by the GENT 24 network of fire specialists. Our experienced consultants have trained with the Fire Industry Association, and they can advise on the best fire safety system for you, as well as installing and servicing fire extinguishers. Our experience and third party accreditation have made us the first choice installer for several landmark London buildings, as well as offices, shops, schools and hospitals.

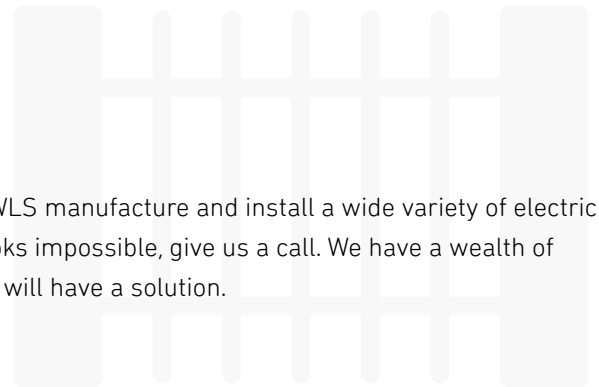

Gates & Railing

Sliding or hinged gates, steel or wood, above ground or underground automation – WLS manufacture and install a wide variety of electric gates and railings for all sorts of contexts. If you're short on space or automation looks impossible, give us a call. We have a wealth of experience, we've worked on some of London's most iconic sites, and our gate team will have a solution.

WLS are independently approved by GateSafe and the Door & Hardware Federation.

Bollards & Barriers

WLS have installed electric rising bollards on a wide variety of sites, including homes, schools and embassies. Bollards are available in a range of heights and finishes, painted or stainless steel, and we're a certified installer for BFT and FAAC products. Our top of the range model is PAS 68 impact tested and will stop a lorry at 40 mph!

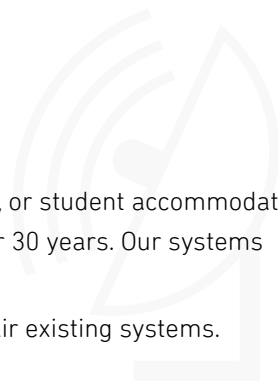

You need electric bollards to be safe as well as secure, so we are registered as a GateSafe installer. Call us to talk through your requirements with one of our consultants.

Satellite TV/ IRS

Integrated Reception Systems deliver TV signal through fibre-optic copper cabling to blocks of flats, hotels, or student accommodation. WLS have been designing and installing satellite TV systems all across London and the South East for over 30 years. Our systems deliver Freeview, DAB & FM Radio, Sky, and other international services.

We're registered with CAI, the Association for Audio Visual Professionals, and we can also service and repair existing systems.

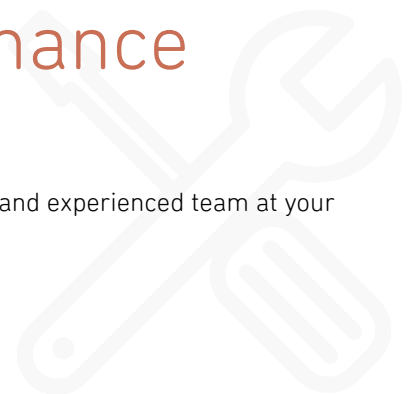

Call Out Service & Maintenance

All fire and security systems need regular maintenance, preferably twice a year. With a highly skilled and experienced team at your service, WLS can repair and maintain your systems, whether we fitted them in the first place or not.

Call our service department to book in a maintenance visit or to set up a servicing contract.
